## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harris'570 et al. in view Powell.

The Harris et al. reference discloses a fuel fill system (see Fig. 10) comprising a multiplicity of components made of thermoplastic material (i.e. see the cross hatching in the drawings) including an outer funnel 50, a plurality of components that could be construed as inner funnels (i.e. see elements 34 and the unlabeled element which carries element 20 and its associated mounting flange), and a vapor recirculation fitting proximate reference numeral 148 in Fig. 10, but is silent as to how the components are fitted together or as being welded together as claimed. The Powell reference discloses another fuel fill system having thermoplastic components that are thermo welded together (see the Abstract in particular) to provide an implied vapor-tight seal. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to thermo weld the components of the Harris'570 et al device together (if not already) in view of the implied teachings of the Powell reference to provide leak-free or vapor tight interfaces between respective components.

In regard to claims 18-29, the method as claimed would be inherent during the normal and assemblage of the resulting device.

Art Unit: 3751

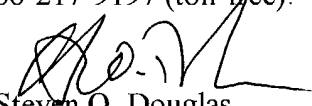

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Bucci and Peikert references pertain to other fuel systems.
